

Teledyne Marine

Teledyne PDS Dredge Operator Training (3 days)

This training is aimed for dredge operators and covers the most common usage of the Teledyne PDS Dredge Module. The first day covers basic operator usage. The following two days are specialized towards Hopper, Cutter or Excavator operators. This hands-on training

takes place in classroom environment where real data or simulation data will be used. The training is suitable for novel and experienced users and can be adjusted to the preferred experience level.
